### ***ABSTRACT***

*This Research aims to test the influence of user participation and user satisfaction on the information systems performance. Respondents participating in this research are Accounting student in accounting departments of some colleges in Jakarta. This Research used survey method. There were 107 respondent participated in this study. The analysis used multiple regression to examine correlation between student participation and student satisfaction to systems successfulness. The result shows that in regression one is user participation and user satisfaction have influence on success of systems but in regression two is student participation don't have influence to student satisfaction.*

*Keywords: User participation, user satisfaction, success of systems*
